Energy Saving Tips

Be Smart. Save Energy.

In warm months, set the thermostat between 78 to 80 degrees when home and 5 to 10 degrees warmer at night or when you are not home.

In cold months, set the thermostat to 68 degrees when home, and then back to 55 to 68 degrees when unoccupied.

Unplug your televisions while on vacation. Most new sets draw power even when turned off.

Install electrical outlet and switch plate insulation.

Vacuum your refrigerator coils underneath and in the back. Check that no obstructions are present as the coils need air space to work.

Make sure food is cooled and covered before it goes into the refrigerator.

Turn off lights, appliances and electronics such as a computer when not in use.

Use LED bulbs instead of incandescent ones. Regular bulbs use most of the electricity to generate heat, so use care when changing bulbs.
